CANDIDATE'S DECLARATION

I hereby certify that the work which is being presented in the thesis entitled “**Empowerment of Women Artisans through Capacity Building Training**” in partial fulfilment of the requirements for the award of the Degree of Doctor of Philosophy and submitted in the Department of Humanities and Social Sciences of the Indian Institute of Technology Roorkee, Roorkee, is an authentic record of my own work carried out during a period from December, 2009 to July, 2013 under the supervision of Dr. Binod Mishra, Associate Professor and Prof. Pashupati Jha, Professor, Department of Humanities & Social Sciences, Indian Institute of Technology Roorkee, Roorkee.

The matter presented in this thesis has not been submitted by me for the award of any other degree of this or any other institute.

(JAYA KRITIKA OJHA)

This is to certify that the above statement made by the candidate is correct to the best of our knowledge.

ABSTRACT

Women in India are one of the most deprived groups in society. Viewed against almost all the indicators of development, they continue to lag behind men. The growing inequality in society makes women vulnerable. India has seen an explosive amount of growth during past few years. Despite all the technological progress, economic growth and social development, the status of women is still a matter of concern. India is facing a major challenge concerning women's empowerment.

Although women are major contributors to the survival of the family and are vital and productive workers in India's national economy, their contribution remains largely unrecognized. Most of them lack in independent choices and options.

Strategies and programs for women empowerment must be devised, implemented and targeted at promoting empowerment on the individual level so as to create appropriate environment for women at the community level. Women empowerment is a multi-layered process. It needs multi-pronged strategies. Strategic and thematic empowerment training can be considered as an approach towards building women's capacities so that they can raise their voices against the discrimination and atrocities they face. If they are capable and strengthened, they would make their own life and the lives of their families better.

The present study is based on the women artisans of desert areas of Rajasthan. Desert region has a high population of women engaged in embroidery activities for income generation. They are skilled in many handicrafts, they spin cotton and wool, they sew artistically, and they embroider beautifully. An assessment of the scenario of women artisans shows that this group of women work and earn; still their individual and social status in the society is very low. In reality, they do not hold the right to spend their own earnings the way they want. They have no role in decision making, no major participation in community, cannot negotiate for their own rights, and do not have the opportunity to access the information which can lead them to betterment on personal front. While going through the reviews of literature, it was observed that not many studies were carried out on the empowerment of women artisans through capacity building training, especially in the Thar Desert of western Rajasthan.

This study explores the idea of (a) inducing more power into a system by means of empowering a women group through imparting individual capacity building training, (b) and, by imparting power in a system, a more rational and constructive system development is possible. It aims at exploring how women empowerment could be reconfigured in our social

system to create opportunities among them. This way, the study explores the dimensions of women empowerment and through it the truer and fuller dimensions of gender empowerment, leading up the verticals to the system empowerment. The study examines and analyses the role of capacity building training in empowering women artisans. Further, the study suggests and recommends the strategies to develop the comprehensive model for capacity building of women associated with embroidery works.

The present study was undertaken with the specific objectives to assess the existing levels of awareness regarding leadership, decision-making, negotiation, community participation, and access to resources and information (empowerment indicators) among respondents, to design and develop an interactive and effective training module for capacity building of women artisans, to implement training package for capacity building of women artisans, and to assess the effect of capacity building training and knowledge gain among the group of women artisans.

This study began with a critical evaluation of the status of women globally and nationally, followed by the concept of empowerment and traced the relationship of capacity building of women and their empowerment.

The conceptual framework for this research study includes the Feministic Approach, Theory of Empowerment by Deepa Narayan, Linda Mayoux's additive approach to Women's Empowerment, Naila Kabeer's Empowerment Framework, and the Capabilities Approach of Amartya Sen & Martha Nussbaum.

An empirical research approach was used for the study. Both qualitative and quantitative research methods were adopted to fulfil the objectives of the study. The study was carried out in the selected villages of Bikaner district of Rajasthan state of the Thar Desert of India. This region was purposively selected for the study because these women artisans, who are traditionally skilled in a special kind of hand embroidery, are located only in this region.

The present study had two phases to select the sample separately. Phase one was the need assessment phase. Phase two was the capacity training implementation phase. For assessing the needs of capacity building trainings for empowerment of the women artisans, the total number of 303 respondents was selected. Phase two was to implement the need based capacity building training package. 105 respondents were selected for this phase.

An interview schedule was carefully designed to assess and identify the needs of the women artisans. A detailed survey was done using a structured interview schedule evolved for this study, to gather relevant information from the respondents. Data was analyzed and then

prioritized to get their capacity building needs on empowerment issues. Five day detailed training module and schedule was prepared on the basis of the findings of need assessment.

Before starting the training, pre-test data from the respondents was collected. Then all the respondents were given complete five days residential training on various empowerment issues to build their capacities. On the completion of the training programme, the post-test was conducted on the respondents who participated in the training. Pre-test and post-test data was collected with the help of specially designed proforma. Pre and Post training data evaluation was carried out, to identify the difference between before and after implementation of training, which determined the knowledge gain in the respondents about empowerment issues like leadership, rights and entitlements, decision making, participation, access to information and communication. Both English and Hindi versions of questionnaire were framed and Hindi version was used to collect data and information. The acquired data was analyzed using statistical techniques.

The study finds that women's capacity building training programs provide a platform to women to realize their own calibre, potential and dimensions. It opens up various possibilities for women, especially to those who are deprived of opportunities and space, to learn different skills for betterment of their lives.

The study concludes that the capacity enhancement through empowerment training can make a person deliver with motivation, conviction and high degree of confidence, thus leading towards empowerment, with a decisive, considerable and visible change in the thought, quality and approach for improving own and the lives of families, community and the state. A singular effort for betterment in this way, directly and critically accelerates a series of change among the primary and expansive stakeholders.

This study emphasizes that women, especially poor rural working women (women artisans in this case), need to be empowered and it will require elaborate strategies and specific programs which will have to be implemented properly. Capacity-building training programs would help women artisans to combat the exploitation they face at home, work, and in community, to reduce disparities, improving social conditions and gender sensitivity. It will help in creating a society based on equality, equity, and freedom.

ACKNOWLEDGEMENT

I wish to express my heartfelt thanks and sincere gratitude to my supervisors Dr. Binod Mishra, Associate Professor and Dr. Pashupati Jha, Professor, Department of Humanities and Social Sciences, IIT Roorkee, for their valuable guidance, competent advice, unfailing help, constant encouragement and motivation through the entire course of my work.

I am grateful to Prof. J.P. Singh, Department of Management Studies and member of my research committee for his inspiring words, positive encouragement and advice. I am thankful to Prof. Renu Rastogi and Dr. Nagendra Kumar of HSS Dept. for their constant inspiration and good wishes. My sincere gratitude is due to Dr. Mukesh Barua, Assistant Professor, Department of Management Studies, IITR, for his kind support and advice, during the course of investigation. I extend my sincere thanks to all the faculty members and staff of HSS department for their help and support.

I am thankful to the Indian Institute of Technology Roorkee, for providing me the MHRD scholarship and allowing me to stay and study at IIT Roorkee.

I want to acknowledge Pushpa Purohit, Secretary, Urmul Seemant Samiti and team members of Urmul Seemant Samiti, Bajju, Rajasthan for their support in conducting survey and in training implementation. I am indebted to all the women artisans of Thar Desert, for their active involvement and cooperation in the study.

I wish to extend special thanks to the library of Women's Studies Research Centre, Calcutta University; library of School of Women's Studies, Jadhavpur University; library of Centre for Women Studies, Pondicherry University; library of Rajiv Gandhi National Institute of Youth Development, Sriperumbudur; and Mahatma Gandhi Central Library of IIT Roorkee, for library consultation during my research work.

I want to thank my dear friend Soma, who has been a great friend and a source of constant inspiration and motivation. I couldn't have accomplished this task without her love, care and support. My friend and batch-mate Kusum Kundu deserves special word of thanks for her friendship, kind concerns, and help throughout the period of study at Roorkee.

I would like to give special acknowledgement and gratitude to Mishra Mam for her affection, care and support all through. I wish to thank Veerendra Mishra for his kind concerns, wishes and motivation. Thanks are due to Sunil Sir, L.V. Aditya, and Devendra Sharma for their good wishes. I am thankful to Rakesh Kumar for giving me valuable suggestions to compile the results of the study.

Words are few to express the love and support of my dear friends Arshia, Vishal, Gulrez, Renar, Suhail, Deepika, and Ravi. They were always there whenever I needed them. I'll never be able to thank them fully for taking pains during my research work.

Words fail to express my gratitude towards my late grandparents. I believe their love and blessings are always with me.

I wish to extend special thanks to my parents for their love, constant encouragement, moral support, and inspiration. I would like to give special acknowledgement and thanks to Anshul and Riddhika for their unfailing love and constant support. Thanks for being with me.

I thank all those who directly or indirectly helped me during my research work and stay at Roorkee.

Jaya Kritika Ojha

4.1.14	Percent distribution of respondents according to land type	111
4.1.15	Percent distribution of respondents according to total yearly income of family (approx) (Rs.), income from agriculture and income from embroidery	112
4.1.16	Percent distribution of respondents according to vehicle in family	114
4.1.17	Percent distribution of respondents according to health facility access	114
4.2.1	Percent distribution of respondents according to the age of learning embroidery	116
4.2.2	Percent distribution of respondents according to the age of starting embroidery professionally	117
4.2.3	Percent distribution of respondents according to number of	118

	trainings taken for capacity building	
4.2.4	Percent distribution of respondents if they have gone out of village for trainings or exposure visits	119
4.2.4(i)	Percent distribution of respondents on the basis of the times they attended the trainings or exposure visits	120
4.3.1	Percent distribution of respondents about leading their group for getting more of embroidery work and for its extension	122
4.3.1(i)	Percent distribution of respondents suggesting that why they think that they can lead their group for getting more of embroidery work and for its extension	123
4.3.1(ii)	Percent distribution of respondents on why the respondents think that they cannot lead their group for getting more of embroidery work and for its extension	123
4.3.2	Percent distribution of responses about encouraging colleagues to participate in village meetings	124
4.3.2 (i)	Percent distribution of respondents regarding how they encourage their colleagues (women artisans) to participate in village meetings	125
4.3.3	Percent distribution of respondents on the basis of the openness to new ideas and inputs related to work from colleague	126
4.3.3 (i)	Percent distribution of respondents on why they don't like to take new ideas and inputs related to work from colleagues	126
4.3.4	Percent distribution of respondents about taking their own decisions	127
4.3.4(i)	Percent distribution of respondents mentioning the person taking decisions in respondent's life	127
4.3.5	What were the major decisions that you have taken in life yourself?	129
4.3.6	Percent distribution of respondents about more decisions taken in their lives by themselves	130
4.3.7	Percent distribution of respondents showing whether they can	131

	decide where to spend their earnings	
4.3.7(i)	Percent distribution of respondents regarding who decides where to spend respondent's earnings	131
4.3.8	Percent distribution of respondents on the basis of their knowledge about their rights and entitlements	132
4.3.9	Percent distribution of respondents regarding their mentioned rights and entitlements	133
4.3.10	Percent distribution of respondents regarding if respondents have ever used their rights and entitlements	134
4.3.10(i)	Percent distribution of respondents suggesting where respondents have used their rights and entitlements	134
4.3.11	Percent distribution of respondents on the basis of what information would help them in their in artisanal work	135
4.3.12	Percent distribution of respondents on the basis of their sources of collecting the relevant information related to work	136
4.3.13	Percent distribution of respondents on the basis of communicating their ideas within their group	137
4.3.13 (i)	Percent distribution of respondents focusing why they cannot communicate their ideas within their group	138
4.3.14	Have you faced problems in expressing your views in front of many people? If yes, what problems?	139
4.3.14 (i)	Percent distribution of respondents on the basis of their problems faced in expressing their views in front of many people	139
4.3.15	Percent distribution of respondents on the basis of their responses on whether communication skills are necessary in their artisanal work or not	140
4.3.15 (i)	Percent distributions of respondents on the basis of their responses on communication skills are necessary in their artisanal work	140
4.3.16	Percent distribution of respondents about how do they exchange necessary information or any new ideas with their group	141

	members	
4.3.17	Percent distribution of respondents on the basis of their participation in household decisions	142
4.3.17(i)	Percent distribution of respondents regarding the matters on which they participate in household decisions	142
4.3.18	Percent distribution of respondents regarding the areas where they want to participate but are not allowed	144
4.3.2	Identified areas for training on the basis of respondent's responses	145
4.4.1.1	Percent distribution of respondents according to caste	148
4.4.1.2	Percent distribution of respondents according to marital status	148
4.4.1.3	Percent distribution of respondents according to SHG membership	148
4.4.1.4	Percent distribution of respondents according to their education level	149
4.4.1.5	Percent distribution of respondents according to number of trainings taken in the last one year	149
4.4.1.6	Percent distribution of respondents according to number of trainings taken in last five years	150
4.4.1.7	Percent distribution of respondents according to the reasons they started doing embroidery	151
4.4.1.8	Comparative analysis of pre and post exposure data before and after imparting training about benefits of the training	151
4.4.1.9	Comparative analysis of pre and post exposure data before and after imparting training that suggest benefits of the trainings	152
4.4.1.10	Comparative analysis of pre and post exposure data before and after imparting training with no benefits of the trainings	152
4.4.1.11	Comparative analysis of pre and post exposure data before and after imparting training discusses responses on who is a good leader	154

4.4.1.12	Comparative analysis of pre and post exposure data before and after imparting training states responses on whether only an educated person can become a good leader	155
4.4.1.13	Comparative analysis of pre and post exposure data before and after imparting training states responses on becoming a leader	156
4.4.1.14	Comparative analysis of pre and post exposure data before and after imparting training suggests the qualities a good leader should have	156
4.4.1.15	Comparative analysis of pre and post exposure data before and after imparting training states responses on becoming a leader	158
4.4.1.16	Comparative analysis of pre and post exposure data before and after imparting training states responses of ‘yes’ on becoming a leader	158
4.4.1.17	Comparative analysis of pre and post exposure data before and after imparting training states responses of ‘no’ on becoming a leader	158
4.4.1.18	Two-way table analysis of pre and post training responses of respondent’s show no relationship in education and becoming leader (on the basis of their education levels)	160
4.4.1.19	Two-way table analysis of pre and post training responses of respondent’s show not only an educated person can become a good leader (on the basis of their education levels)	160
4.4.1.20	Two-way table analysis of pre and post training responses of respondents who believes that not only an educated person but an illiterate women can also become a leader if capacity building training is provided to them (on the basis of their education levels)	161
4.4.1.21	Comparative analysis of pre and post exposure data before and after imparting training states the decisions where women should be consulted and participated	162
4.4.1.22	Comparative analysis of pre and post exposure data before and after imparting training states the kinds of decisions respondents	163

	wanted to participate	
4.4.1.23	Comparative analysis of pre and post exposure data before and after imparting training states whether any decisions changed after respondent's intervention	164
4.4.1.24	Comparative analysis of pre and post exposure data before and after imparting training presents the decisions changed after respondent's intervention	164
4.4.1.25	Comparative analysis of pre and post exposure data before and after imparting training discusses if the respondent's earnings helped them in various dimensions of decision making	166
4.4.1.26	Comparative analysis of pre and post exposure data before and after imparting training states whether every person should be able to communicate properly	167
4.4.1.27	Comparative analysis of pre and post exposure data before and after imparting training discusses whether the respondents feel capable to communicate their views easily within their group	168
4.4.1.28	Comparative analysis of pre and post exposure data before and after imparting training states the reasons of respondents for not feeling capable to communicate their views easily within their group	168
4.4.1.29	Comparative analysis of pre and post exposure data before and after imparting training shows whether respondents are able to communicate properly outside their groups	170
4.4.1.30	Comparative analysis of pre and post exposure data before and after imparting training states the reasons of respondents for not feeling capable to communicate properly outside their groups	170
4.4.1.31	Comparative analysis of pre and post exposure data before and after imparting training states whether the respondents are able to talk to other people with confidence	171
4.4.1.32	Comparative analysis of pre and post exposure data before and after imparting training states whether the respondents are able	172

	stand and speak in their group meetings	
4.4.1.33	Comparative analysis of pre and post exposure data before and after imparting training discusses whether the respondents could speak in front of huge gathering or in any mass convention	173
4.4.1.34	Comparative analysis of pre and post exposure data before and after imparting training states if given an opportunity what would respondents like to learn	174
4.4.1.35	Comparative analysis of pre and post exposure data before and after imparting training discusses if given an opportunity what would respondents like to do	175
